

Installing TinyWeb

 ritlabs.com/en/products/tinyweb/install.php

To install TinyWeb server just create a shortcut in Startup menu with the following properties:

Target	<code>c:\www\bin\tiny.exe</code> <code>c:\www\root</code>
--------	--

Start In	<code>c:\www\log</code>
----------	-------------------------

`c:\www\bin\tiny.exe` is the path to TinyWeb executable, `c:\www\root` is the path to www home (root) directory, and `c:\www\log` is the directory for log files TinyWeb keeps.

TinyWeb is neither windowed nor console application, moreover, it is not a Windows Service. Once started, `tiny.exe` will appear in Task List. There is no way to stop Tiny Web except End Task operation.

Command-line Options

- First parameter (mandatory) is a path www home (root) directory.
- Second parameter (optional) is a port number. By default it is 80 for HTTP and 443 for HTTPS(SSL/TLS).
- Third parameter (optional) is a dotted-decimal IP address to bind the server. By default, TinyWeb binds to all available local addresses.

Examples

Run TinyWeb on port 8000:

```
c:\www\bin\tiny.exe c:\www\root 8000
```

Run TinyWeb on port 8000 and address 212.56.194.250:

```
c:\www\bin\tiny.exe c:\www\root 8000 212.56.194.250
```
